PROFESSIONAL SUMMARY

Computer Engineering graduating student focused on backend development, real-time systems, and AI-assisted software engineering workflows. Experienced in building web applications using JavaScript, Firebase, REST APIs, and cloud-based technologies, with strong interest in scalable backend architecture, automation, and deployment systems. Passionate about designing structured, real-world applications that solve problems through logic, system thinking, and modern development practices. Currently expanding expertise in backend engineering, Python development, and cloud technologies.

EXPERIENCE & TRAINING

Project Management Intern (OJT) | Hi-P Philippines, Batangas

Jan 2026 – May 2026

- Assisted in monitoring technical project lifecycles and tracking resource timelines within a high-volume manufacturing environment.
- Gained valuable exposure to large-scale industrial infrastructure, corporate documentation, and professional business workflows.
- Observed multi-departmental project coordination and supported basic day-to-day administrative project tracking.

EDUCATION

Bachelor of Science in Computer Engineering

Manuel S. Enverga University Foundation, Candelaria Inc.

2022 – 2026

- Excellence in Practicum
- Outstanding Achievement

PROJECTS

Taskly - Realtime Task & Project Management Web Application | Pre-Development

Personal Project | Full-Stack Developer

- Developing a realtime task and project management application with cloud synchronization, structured workflow organization, and project-based task categorization.
- Implemented Firebase Authentication and Firestore integration for secure realtime user data management and seamless synchronization across sessions.
- Focused on scalable architecture, clean system structure, and deployment-ready workflows while designing a modern productivity-focused user experience.

IoT-Enabled Solar Charging & Water Vending Kiosk | 2025 – 2026

Thesis Project | Project Manager

- Designed a student kiosk combining water dispensing logic with multi-slot device charging infrastructure.
- Integrated Arduino, Raspberry Pi, RFID readers, coin acceptors, and sensors for hardware control.
- Connected a custom web dashboard to a Google Firebase database to log real-time transaction data.

TECHNICAL SKILLS

Languages: HTML, CSS, Python, JavaScript, C++, Java, Visual Basic

Hardware & IoT: Arduino, Raspberry Pi, RFID Systems, Sensor Integration

Infrastructure: Network Configuration (LAN), OS Installation, Hardware Troubleshooting

Software/Tools: VS Code, AutoCAD (2D/3D), Firebase, GitHub, Godot Engine, Codex, Copilot, MS Office

HONORS & CERTIFICATIONS

- Joint Delivery Voucher Program: Computer System Servicing – Training (TESDA - 320 Hours)
