PROFESSIONAL SUMMARY

A highly analytical Computer Engineering graduate with a core interest in network infrastructure, cloud foundations, and the evolving field of AI-augmented programming. Having successfully completed a technical internship, I gained practical real-world exposure to project environments and operational workflows. I am deeply motivated by the logic of designing practical hardware and software systems that automate tasks, solve real problems, and make daily life easier. Recognized for resourcefulness in using AI tools as learning assistants to bridge technical gaps, I am eager to secure an entry-level role where I can expand my skills under professional mentorship.

EXPERIENCE & TRAINING

Project Management Intern (OJT) | Hi-P Philippines, Batangas

Jan 2026 – May 2026

- Assisted in monitoring technical project lifecycles and tracking resource timelines within a high-volume manufacturing environment.
- Gained valuable exposure to large-scale industrial infrastructure, corporate documentation, and professional business workflows.
- Observed multi-departmental project coordination and supported basic day-to-day administrative project tracking.

EDUCATION

Bachelor of Science in Computer Engineering

Manuel S. Enverga University Foundation, Candelaria Inc.

2022 – 2026

- Dean's Lister | Academic Scholar (Multiple Semesters)

Senior High School – ICT / Computer Systems Servicing Track

Sta. Catalina National High School, Quezon

2020 – 2022

ACADEMIC PROJECTS

IoT-Enabled Solar Charging & Water Vending Kiosk (Thesis) | 2025 – 2026

- Designed a student kiosk combining water dispensing logic with multi-slot device charging infrastructure.
- Integrated Arduino, Raspberry Pi, RFID readers, coin acceptors, and sensors for hardware control.
- Connected a custom web dashboard to a Google Firebase database to log real-time transaction data.

Work It Out: Fitness Application | 2024

- Explored mobile application design and game development logic using the Godot Engine and GDScript.
- Implemented a basic system algorithm that categorizes player attributes and training paths based on user BMI.
- Focused on translating logical user conditions into active in-game progression systems.

TECHNICAL SKILLS

Languages: HTML, CSS, Python (AI-Augmented), C++, Java, Visual Basic

Hardware & IoT: Arduino, Raspberry Pi, RFID Systems, Sensor Integration

Infrastructure: Network Configuration (LAN/WAN), OS Installation, Server Setup, Hardware Troubleshooting

Software/Tools: VS Code, AutoCAD (2D/3D), Google Firebase, GitHub, Godot Engine, Codex, Copilot, MS Office

HONORS & CERTIFICATIONS

- Joint Delivery Voucher Program: Computer System Servicing – Training (TESDA - 320 Hours)
